

Tech Specs

Tube guru 300 B SE

Tube guru offers all single-ended designs operating in pure class (A) with full-wave class (A) valve rectification. Custom built, fully discreet proprietary circuit designs with proprietary dual C-Core French alloy (AG optional) transformer platforms. All amplifiers use custom, proprietary output transformer windings which lead to the outstanding transparency and highly resolving sound.

Offering the flexibility of switching between the legendary 300B tube and the sweet sounding Type 50 tube, these monoblocks are in a class by themselves. The 300B tube needs no introduction, but is one of the most glorious sounding tubes available. And with companies like Emission Labs offering current production of standard and mesh plate 300B's one can get the best sounding tubes without the reliability issues of old tubes.

With the flick of a switch, one can insert the Type 50 tube and be bathed in an even warmer musical glow. The Type 50's mid-range is to die for. The 50 has a power rating of about 4 watts per channel, so they must be used with a fairly efficient pair of loudspeakers.

These amplifiers use interstage transformers for ultimate performance.

Specifications:

Power output: 8.5 watts per channel
Total Harmonic Distortion: 0.8% 1khz
Frequency Response: 12hz-49khz + 2db
Power Transformer: 550 watts
Output transformer: 510 watt Double C.Core
Choke- PI Filtering
Tube compliment:

ECC 88-variants include the 6H23n-EB, 7308, 6DJ8 and 6922
6463 used as driver tube-neutral tube with great dynamics
300B/Type 50
5U4G as rectifier tube

\$8000. Per pair
